# 228 atoms: energy and simulation schedule

## Measured temperature and simulation milestones

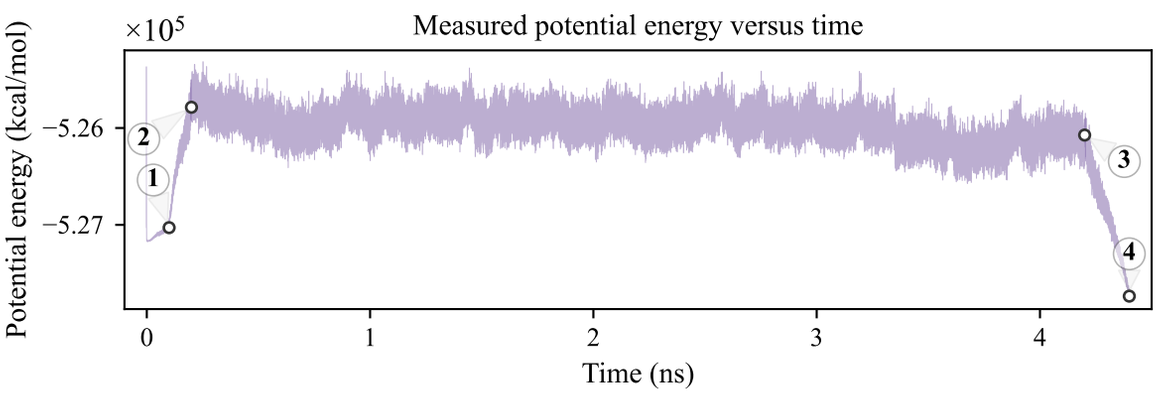

**1** 300 K target (0.10 ns)

**2** 2500 K hold begins (0.20 ns)

**3** Cooling begins (4.20 ns)

**4** Final 300 K target (4.40 ns)

## Measured potential energy versus time

2500 K hold: 0.2–4.2 ns

σ(U) = 153 kcal/mol
σ(U)/|mean U| = 0.000291

Whole-hold spread includes drift.

Matching numbers identify setup milestones; energy density uses all reported observations.
