228,000 atoms: energy and simulation schedule

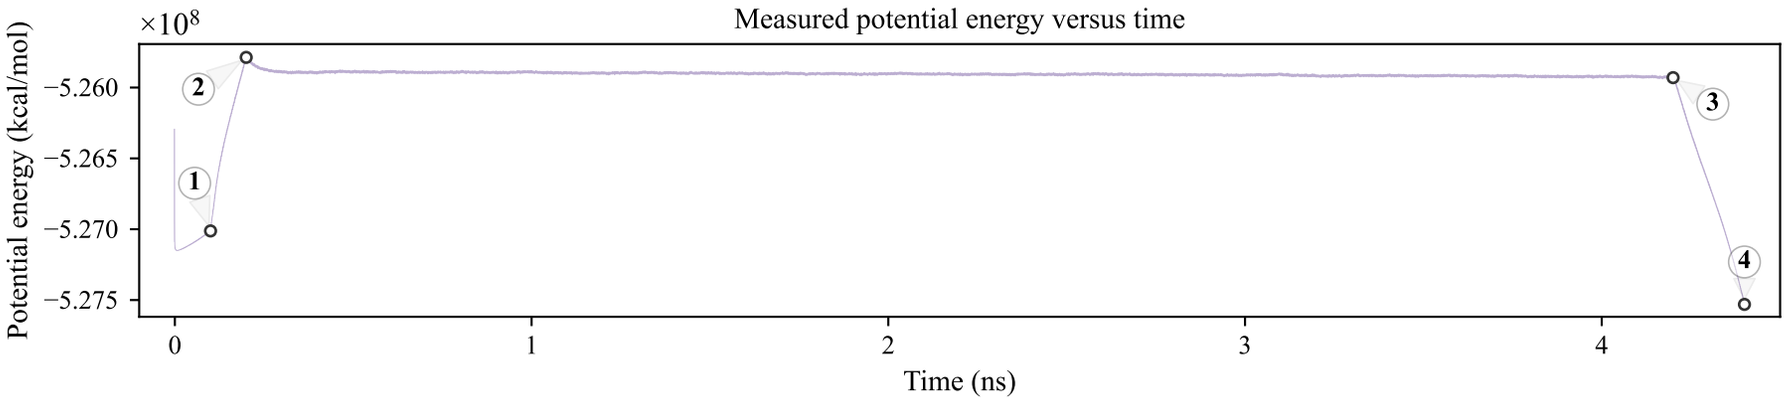

1 300 K target (0.10 ns)

2 2500 K hold begins (0.20 ns)

3 Cooling begins (4.20 ns)

4 Final 300 K target (4.40 ns)

2500 K hold: 0.2–4.2 ns

σ(U) = 1.35e+04 kcal/mol
σ(U)/|mean U| = 2.56e-05

Whole-hold spread includes drift.

Matching numbers identify setup milestones; energy density uses all reported observations.
