

Historical 96-atom example: true 2D connectivity layouts

Original selected-atom connectivity
96 atoms · 95 cutoff connections

Quenched selected-atom connectivity
96 atoms · 93 cutoff connections

C₃₈H₅₂N₄O₂ in each panel · Every hydrogen retained · Purple = connections present in only one state
Shared heavy-atom 2D layout generated from adjacency; lengths are schematic and lines do not assign bond order.
Historical original/quench export pairing remains provisional.
