22.8-million-atom run: temperature–potential-energy counts

400 × 400 square cells in both panels. Full: 6.275 K × 432,500 kcal/mol; Hot detail: 0.025 K × 12,500 kcal/mol.
All 366,067 records retained, including restart repeats. 2500 K interval: 334,062 records (331,366 in zoom window); temperature SD 0.435 K.
Raw total potential energy (kcal/mol), without reference subtraction or per-atom normalization. Color: records per bin (log scale).
